AMIR SOHEL

Staff Technical Program Manager | Agentic AI Platforms • Cloud Infrastructure • 0 to 1

Toronto, Canada • aot.amirsohel@gmail.com • (416) 669-2382 • linkedin.com/in/asohel • github.com/amir-sohel-builds

Canadian citizen • TN eligible • Open to U.S. relocation

PROFESSIONAL SUMMARY

Staff Technical Program Manager and former software engineering lead with 12 years delivering AI and cloud platforms. Built Forge, Warner Bros. Discovery's first agentic AI platform, from 0 to 1 as sole TPM and scaled it to 79+ production agents used across HBO Max, Discovery+, TNT Sports, and CNN. Hands-on with the Claude API and Amazon Bedrock; leads programs supporting 350+ engineers and streaming products serving 130M+ subscribers.

CORE EXPERTISE

AI platforms: Agentic AI • Claude API • Amazon Bedrock • AgentCore • MCP integrations • Prompt lifecycle • Evaluation and observability

Program leadership: 0 to 1 strategy • Product discovery • Technical roadmaps • Cross-org delivery • Operating models • KPIs/OKRs • Executive decisions • RAID

Cloud and engineering: AWS • Kubernetes/EKS • Terraform • Argo CD/GitOps • CI/CD • Kafka • Java • Python • TypeScript • SQL • GraphQL • REST APIs

PROFESSIONAL EXPERIENCE

Staff Technical Program Manager | Warner Bros. Discovery | Toronto, Canada | Feb 2025 to Present

Sole TPM for a 350+ engineer Platform Engineering organization serving WBD's 4,800+ engineer DTC organization behind HBO Max and WBD streaming services globally.

- **79+ agents live in production.** Built Forge from 0 to 1, driving adoption across every engineering and product team supporting HBO Max, Discovery+, TNT Sports, and CNN, turning discovery with 30 to 40 engineers into the roadmap, operating model and KPIs.
- Shipped the agent runtime and CI/CD, eval-gated releases, prompt versioning and rollback, observability, and Jira/GitHub integrations, with agents for incident triage and change risk.
- **Built the Platform Engineering org's operating system.** Created the repositories it runs on: a library of 20 Claude Code agents (one install, propose-and-review intake) and eight live dashboards behind SSO for the monthly planning cycle, execution, and support, with AI categorization routing support tickets against SLOs and status reporting that refreshes itself from Jira and Confluence.
- **Authored dont-hallucinate.** A guardrail plugin any team can install from the internal plugin registry: agents check configured sources first, declare what they cannot verify, and refuse rather than invent answers. Also built a token-routing plugin that routes large reads to a smaller model, cutting inference cost about 66%.
- **$24.5M in annual cloud savings.** Led decommissioning across 40+ AWS accounts, reducing spend from $57M to $32.5M, sustaining 99.995% uptime through peak streaming events.
- Raised SLO compliance from 67% to 84% and cut support tickets 28% after analyzing 17,000+ tickets, building Power BI dashboards. Self-service deployment cut code-to-production from three days to under four hours, with one-click rollbacks during high-stakes premieres.

Senior Technical Program Manager | Xactly Corp | Toronto, Canada | Jul 2022 to Feb 2025

Led platform transformation programs for an enterprise SaaS company serving 500 customers across six product teams.

- Led an 18-month identity transformation across six product teams, moving 500 enterprise customers to Okta SSO and reducing login latency 60%.
- Built the business case and roadmap for a phased AWS EKS migration, cutting infrastructure costs 35%. Established Argo CD GitOps standards, runbooks, and rollback procedures across six product teams, compressing release cycles from four days to same-day.
- Stood up a cross-functional AI and ML steering committee across engineering, product, and data science, shipping churn prediction and revenue forecasting for $7.5M in revenue.
- Migrated business-critical databases to Azure with 99.9% uptime and zero data loss, and production pods to Oracle Cloud Infrastructure, saving about $4M annually.

Lead Software Engineer | Cognizant / TJX Companies | Toronto, Canada | Apr 2014 to Jul 2022

Backend engineering lead for payment, point-of-sale, and e-commerce infrastructure across 5,000 stores and $2B+ in annual payment volume.

- Led delivery of a $110M e-commerce program and scaled a payment-processing platform from a 10-store pilot to 5,000 locations, at peak Black Friday loads of 50,000 transactions per minute and 99.95% uptime, coordinating store systems, payment processors, and PCI compliance teams.
- Architected a GraphQL layer that cut e-commerce API response time from 800 ms to 200 ms and payload size 70%, becoming the standard for new microservices. Built Java and Spring Boot services for real-time inventory and pricing, sustaining 10x normal traffic during promotional events.
- Incident commander for Sev1 outages: led triage calls, coordinated cross-functional resolution, and wrote RCAs to prevent recurrence. Mentored 3 junior engineers on distributed systems and production debugging, 2 promoted to mid-level within 18 months.

EDUCATION

Bachelor of Technology, Electronics and Instrumentation Engineering | West Bengal University of Technology
